IN THE CLAIMS:

- 1. (Original) A process for making artificial rocks for use, in particular, in aquariums, tanks, swimming pools and the like, that comprises the following operating steps:
- a. carrying out a first deposition of a mixture of powdered aggregates, resin, additives, within a cast or mould;
 - b. catalyzing the mixture of said first deposition;
 - c. covering the surface thus obtained with isophtalic or bisphenolic polyester resin;
 - d. carrying out a second deposition of powdered aggregates, resin, additives;
- e. covering the surface derived from the second deposition with a layer of structural component and with resin;
 - f. polymerizing the intermediate product thus obtained;
 - g. covering the surface thus obtained with a layer of gel;
 - h. polymerizing the product thus obtained;
 - i. removing the product from the mould;
 - j. subjecting the product to a heating treatment.
- 2. (Original) Process according to claim 1, wherein the step "a" is carried out by means of a cast in silicone of a rock to be reproduced by the construction of a reinforced resin mould.
- 3. (Original) Process according to claim 1, wherein the deposition of steps "a" and/or "d" consists of a layer of mixture whose thickness ranges from 0/5 to 10 cm.

2

- 4. (Original) Process according to claim 3, wherein the layer of mixture has a thickness between 3 and 4 cm.
- 5. (Original) Process according to claim 1, characterized in that the aggregates used for the mixture of the steps "a" and/or "d" have a variable granulometry and a diameter less than 5 mm.
- 6. (Original) Process according to claim 5, wherein the granulometry of the aggregates is variable and their diameter is less than 2 mm.
- 7. (Original) Process according to claim 1, where in the resin used in the steps "a" and/or "d" is an isophtalic or bisphenolic polyester resin.
- 8. (Original) Process according to claim 1, wherein the steps "a" and/or "d" there are used the following additives: a thickener, structural glass fibers, various aggregates.
- 9. (Original) Process according to claim 1, wherein for the step "e" there are used two successive layers of glass fiber and resin.
- 10. (Original) Process according to claim 1, wherein the step "g" provides a covering with a first layer of white gel-coat and second layer of paraffined black gel-coat.

3

9149412822

- 11. (Original) Process according to claim 1, wherein the step "j" provided for a treatment in oven for a time of about five hours, three of which at 100 °C.
- 12. (Original) Process according to claim 1, wherein the product is washed after the step "j" with water at about 100 °C and/or with steam.
- 13. (Withdrawn) A product defining an artificial rock, to be used, in particular, for aquariums, tanks, swimming pools and the like, product that consists of a mixture of aggregates, isophtalic or bisphenolic polyester resin and additives.
- 14. (Currently Amended) Product according to claim [[14]] 20, wherein the granulometry of the aggregates is variable and their thickness is less than 5 mm in diameter.
- 15. (Currently Amended) Product according to claim [[14]] 20, wherein the granulometry of the aggregates is variable and their diameter is less than 2 mm.
- 16. (Currently Amended) Product according to claim [[13]] 20, wherein the additives comprise a thickener, structural glass fiber and various aggregates.
 - 17. (Currently Amended) Product according to claim [[13]] 20, wherein it is made up

4

of two overlapping layers of said polymerized mixture, covered with two successive layers of glass fiber and resin.

- 18. (Currently Amended) Product according to claim [[13]] 20, wherein a one-square meter portion of the product comprises: gr. 9000 of resin; gr. 180 of catalyst; gr. 14000 of aggregates composed by calcium carbonate and quartz; gr. 100 of thixotropic thickener; gr. 1350 of glass fibers; gr. 400 of structural glass fiber in fabric form; gr. 500 of structural glass fiber; gr. 1000 of resin filled with fine aggregates and pigment; gr. 40 of liquid paraffin.
- 19. (Currently Amended) Product according to claim [[13]] 20 wherein a one-square meter portion of the product comprises: gr. 9000 of resin "SYNOLITE 0280-I-1"; gr. 180 of catalyst "PEREXTER B18"; gr. 14000 of aggregates consisting of calcium carbonate and quartz; gr. 100 of thixotropic thickener "CAB-O-SIL FUMED SILICA"; gr. 1350 of glass fibers "MAT POWDER" 450 gr/m²; gr. 400 of structural glass fiber "ROVING AGIMAT" 800/300GR/M² in fabric yarn form; gr. 500 of structural glass fiber "R63SX1 CHOPPED STRAND"; gr. 1000 of resin filled with fine aggregates and pigment "NEOGEL ISI 8378-W-0100"; gr. 40 of liquid paraffin.
- 20. (New) A product defining an artificial rock, to be used, in particular, for aquariums, tanks, swimming pools and the like, the product made by the process of:
 - a. carrying out a first deposition of a mixture of powdered aggregates, resin, additives,

within a cast or mould;

- b. catalyzing the mixture of said first deposition;
- c. covering the surface thus obtained with isophtalic or bisphenolic polyester resin;
- d. carrying out a second deposition of powdered aggregates, resin, additives;
- e. covering the surface derived from the second deposition with a layer of structural component and with resin;
 - f. polymerizing the intermediate product thus obtained;
 - g. covering the surface thus obtained with a layer of gel;
 - h. polymerizing the product thus obtained;
 - i. removing the product from the mould;
- j. subjecting the product to a heating treatment, wherein the product consists of a mixture of aggregates, isophtalic or bisphenolic polyester resin and additives.
